Interactive Prototype 2

Submission folder prepared on 21 October 2026. Documents are PDFs. The MP4, APK, and Unity ZIP are retained because the assessment also requires a working prototype, video, and source.

Folder	Contents
Testing	Prospective Testing Plan and printable Participant Record PDFs.
Design Journal	Design Journal PDF and the original paper-prototype photograph in PDF form.
Evaluation	Design Evaluation 3 and Reflection PDF, including the supplied participant evidence.
Research Evidence	The supplied XR Study Whiteboard Article Evidence PDF, copied unchanged.
Code Study	The code study guide PDF explaining all 34 custom C# scripts.
Earlier Evidence	Evaluation 1 and Evaluation 2 PDFs for the development history.
Media	Syifa's 1080p MP4 recording, about 5 minutes 38 seconds, with an audio track.
Builds	The existing Quest 2 v1.3 APK. No new app build was made during cleanup.
Source Code	Whiteboard Unity Project.zip with Assets, Packages, and ProjectSettings.

Open the Unity project with Unity 6000.3.21f1. The editable project remains in the repository folder named Whiteboard. The ZIP is a portable source snapshot.

Editable documents, spreadsheets, JSON indexes, helper scripts, and the original MOV are kept separately under Working Files/Interactive Prototype 2. They are outside this submission folder.

Readiness and Submission

Prepared

The Unity source archive and existing APK are packaged.

The plan, journal, participant form, evaluations, research evidence, and code guide are PDFs.

Existing participant testing and the supplied Syifa video are retained. The recording was opened and sampled. The full audio was not independently reviewed.

Before and during the studio

Submit the plan before the first studio and confirm the allocated session time.

Check the known working APK, charge equipment, and confirm that the marker can access the video.

Attend the mandatory in-person studio and record any additional testing requested.

Keep real session dates. Add new observations to the evaluation if needed, then submit the required source, video, plan, journal, and outcomes by the end of the session.

The large MP4, APK, and source ZIP are stored locally and are excluded from Git. The tracked Unity source and PDF documents remain on GitHub. File preparation is not an upload confirmation.
