

Interview Participant 1 – XR Study Whiteboard

Evidence: [XR Study Whiteboard – Participant 1 Testing Recording](#)

Nayaka: Hi, thanks for testing my XR Study Whiteboard prototype. Please think aloud while you use it and tell me what you expect to happen. I am testing the prototype, not you, so there are no wrong answers. You can stop at any time. Is it okay if I audio record your feedback for my evaluation? The recording will only be used for this project, and you can ask me to stop at any time.

Interview Participant 1: Yeah, that's okay.

Nayaka: Okay. Can you please start by drawing one horizontal line, one vertical line, and one circle on the whiteboard? First, you need to go to the whiteboard.

Interview Participant 1: Okay.

Nayaka: Can you try to choose the tools and colours?

Interview Participant 1: Okay.

Nayaka: Can you start by doing a vertical line, horizontal line, and create a circle on it?

Interview Participant 1: Okay.

Nayaka: You have also changed the colour from black to red. Next, can you try to erase your drawing?

Interview Participant 1: Oh, okay.

Nayaka: That's correct. Nice. Now can you try to clear the board so you can clear everything without erasing it manually?

Interview Participant 1: Okay.

Nayaka: Nice. You demonstrated that very well. Next, can you go to one of the tables? Imagine you are a student and you need to go to a table.

Interview Participant 1: Oh, okay.

Nayaka: Maybe you could try the teleport button?

Interview Participant 1: Yes.

Nayaka: Okay, so you went to the table. What can you see here? What are you thinking?

Interview Participant 1: I can see the whiteboard, and I can see the door on the right.

Nayaka: And what else can you see?

Interview Participant 1: I can see a piece of paper.

Nayaka: What are you expecting from seeing this?

Interview Participant 1: Maybe I can write something or draw something on the paper?

Nayaka: Yes. You can also still see the whiteboard. What do you think that means?

Interview Participant 1: Oh, I can take notes while people are writing on the whiteboard.

Nayaka: That's correct. Can you try to work out how you can write on the paper on your table?

Interview Participant 1: Okay.

Nayaka: Maybe you can move forward if you want to see it more clearly.

Interview Participant 1: Okay. Oh, nice.

Nayaka: Yes, you can draw on it. Can you erase it?

Interview Participant 1: Let me try.

Nayaka: Okay. Can you clear your drawing as well?

Interview Participant 1: Okay.

Nayaka: Nice. I think that's all of the features you can use for now. What was the easiest or most difficult part?

Interview Participant 1: I think the easiest part was writing on the whiteboard.

Nayaka: What was the hardest part?

Interview Participant 1: The paper on the table.

Nayaka: Why do you think that was harder?

Interview Participant 1: I didn't see the pen tool.

Nayaka: So you couldn't see the tool clearly?

Interview Participant 1: Yeah.

Nayaka: But you figured it out by moving forward, and then you could see the buttons?

Interview Participant 1: Yeah.

Nayaka: Were the drawing controls and menus clear? Could you understand the whole thing clearly?

Interview Participant 1: Yeah.

Nayaka: Did the lines and circles draw smoothly without unexpected marks?

Interview Participant 1: I can draw smoothly on the whiteboard, but on the paper it's a bit glitchy.

Nayaka: Okay, thank you for your feedback. Which surface was easier to use, the whiteboard or the paper?

Interview Participant 1: The whiteboard.

Nayaka: What is one important improvement you would suggest?

Interview Participant 1: I would probably make the teleportation button a bit bigger, or maybe add a hint, because I didn't see it in the corner.

Nayaka: So at first you didn't notice it?

Interview Participant 1: Yeah, I didn't really see it. I didn't know you could teleport.

Nayaka: Okay. On a scale from one to five, how confident would you feel using this prototype again?

Interview Participant 1: Four.

Nayaka: Do you think this idea could be useful or important?

Interview Participant 1: I think it's really intuitive and really important for children, especially during online school or whatever. I think it's nice.

Nayaka: So it could help them focus more like they are in a real class?

Interview Participant 1: Yeah.

Nayaka: Thank you so much for your feedback and your answers. I really appreciate it.
